

## Enabling stablecoin payments across B2B and B2C channels

Instant, low-cost, and compliant stablecoin payment rails that plug into your existing payments stack

An enterprise-ready stablecoin payments solution that integrates seamlessly into your payments automation stack and delivers instant cross-border payments at a fraction of traditional costs. Built for financial institutions and enterprises that manage high-volume payments, the solution combines blockchain speed and transparency with the compliance and integration capabilities required for production deployment.

### Features

#### Regulatory framework

Built to work with regulated stablecoin issuers and custodians, supporting AML/KYC requirements

#### APIs and connectors

REST APIs, webhooks, and connectors for ERP, AR/AP, core banking, and payment hubs

#### Multi-rail support

Stablecoin + Traditional Rails- Offer stablecoin rails alongside ACH, virtual cards, Zelle, PayPal, and Push-to-Card

#### Lower cost and friction

Eliminate many correspondent bank fees and reduce FX/treasury overhead

#### Reconciliation and audit

Deterministic settlement records, immutable logs, and reconciliation hooks

#### On/off-ramp and FX routing

Automated fiat-stablecoin conversion with FX partners and fallback rails

### Business Impact

- ▶ Lower cross-border payment costs
- ▶ Turn multi-day transfers into instant settlements
- ▶ Integrate with existing rails, no rip-and-replace
- ▶ Enable faster, traceable payments for all stakeholders
